

## 4. jQuery Bootstrap Rating Plug-in

Many jQuery plug-ins offer user interface elements for interaction. The Bootstrap Rating plug-in provides a glyphicon-based rating input for collecting user opinions.

You can access the GitHub project page for the Bootstrap Rating plug-in at <https://github.com/dreyescat/bootstrap-rating> (<https://github.com/dreyescat/bootstrap-rating>).

This example demonstrates how to create a basic form with multiple customized rating inputs included.

```
<!DOCTYPE html>
<head>
  <title>Bootstrap Rating Example</title>
  <!-- load jquery library from cdn -->
  <script src="https://ajax.googleapis.com/ajax/libs/jquery/1.11.3/jquery.min.js"></script>
  <!-- load bootstrap js from cdn -->
  <script src="https://netdna.bootstrapcdn.com/bootstrap/3.3.6/js/bootstrap.min.js"></script>
  <!-- load bootstrap css from cdn -->
  <link rel="stylesheet" href="https://netdna.bootstrapcdn.com/bootstrap/3.3.6/css/bootstrap.min.css">

  <!-- load plugin js file -->
  <script src="bootstrap-rating.min.js"></script>
</head>
<body>
  <form>
    <div class="jumbotron">
      <h1>
        Rate your progress:
        <input type="hidden" id="rating1" class="rating" value="2">
      </h1>

      <p>
        Rate your happiness:
        <input type="hidden" id="rating2" class="rating"
          data-filled="glyphicon glyphicon-heart"
          data-empty="glyphicon glyphicon-heart-empty">
      </p>
    </div>
  </form>
</body>
</html>
```

Note: In order to save your user's choices, server-side code would be needed. As we adopt the WordPress content management system platform in coming weeks, we will gain access to server-side functionality that will enable saving of user ratings.
