To log in to any wordpress site, you will navigate to the domain followed by /wp-admin

For example: www.snapcats.org/wp-admin
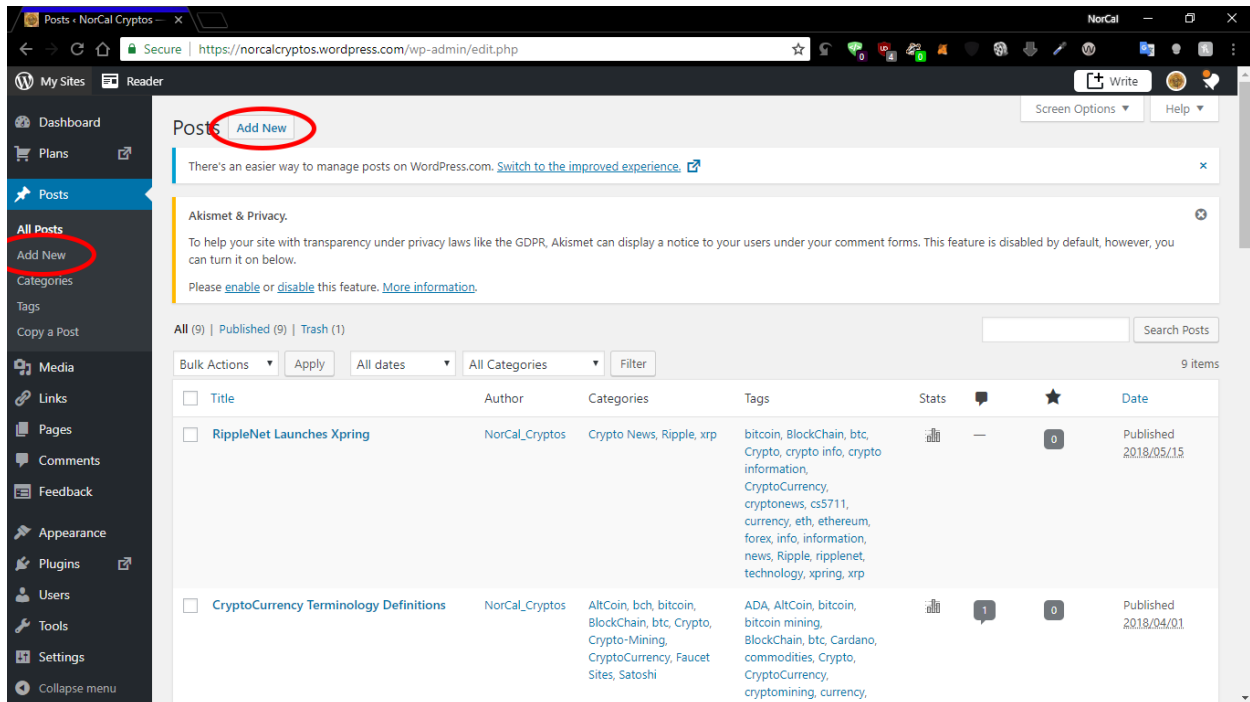

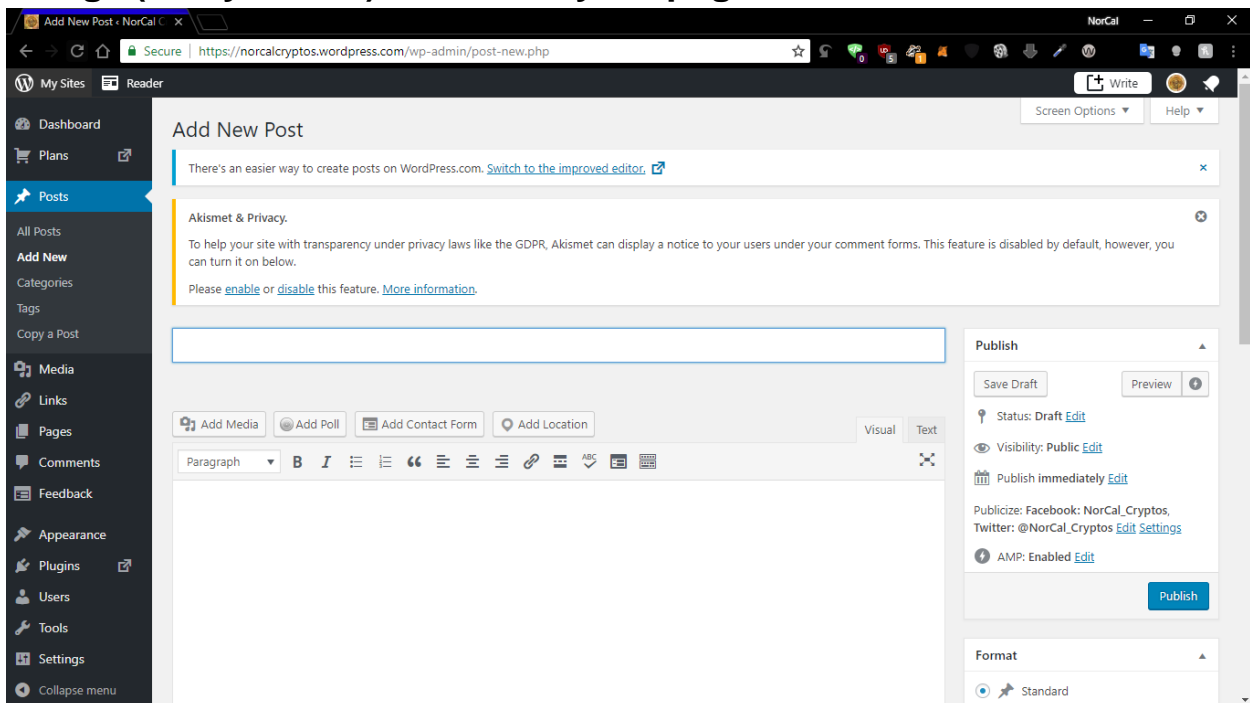

This will lead to a login page, such as:

Once you log-in, you will be directed to your dashboard, which will appear similar to this:
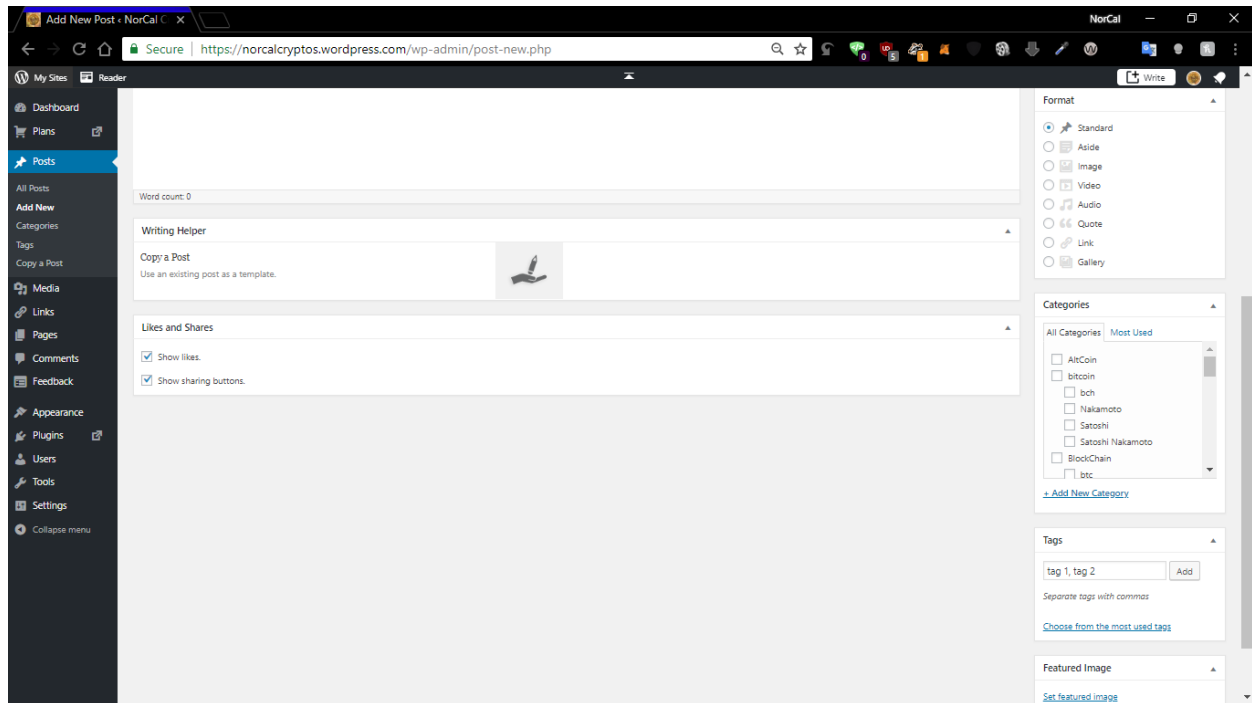

To make a new post, click on the "Posts" link on the left side-bar, then click "Add New"

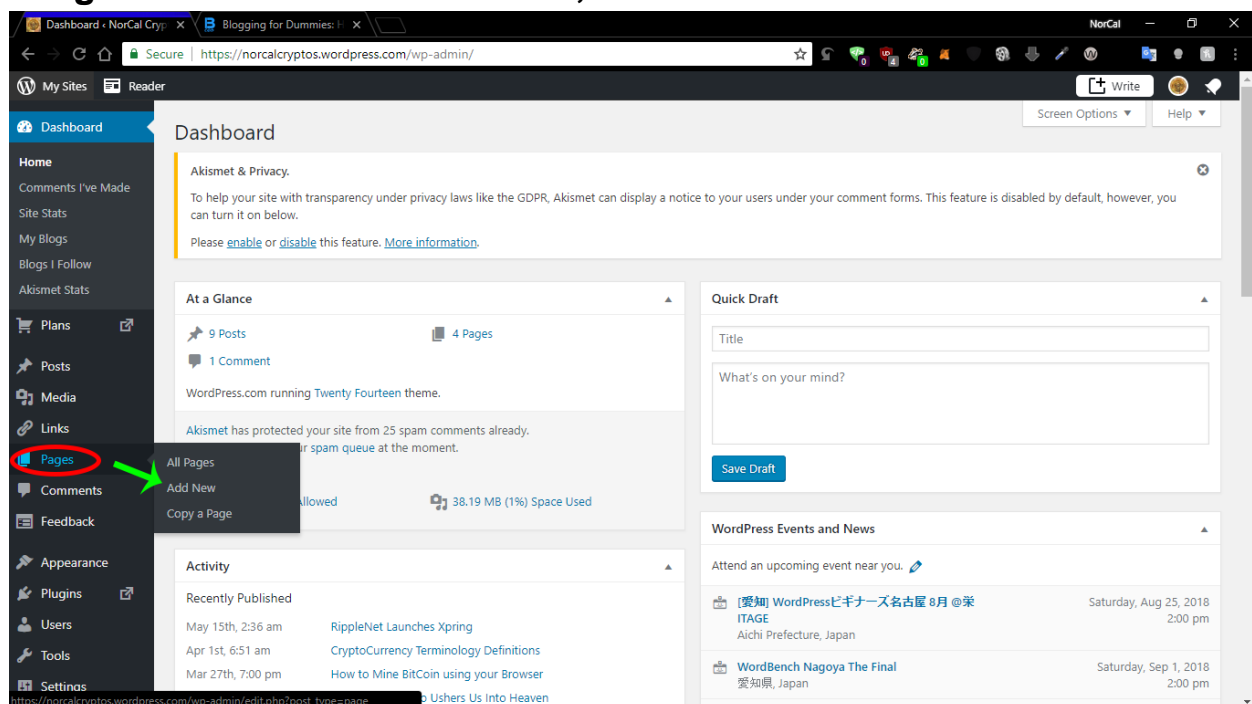

From here you can easily add a new post which will show up in the "blog" (Darryl's Den) section of your page

Make sure to set the format, categories, add tags, and set a featured image. This will add organization to the post and help search engines to index your posts so they show up in search results.

To add a new page to your websites structure, then click on the "Pages" link on the left side-bar, then click "Add New".
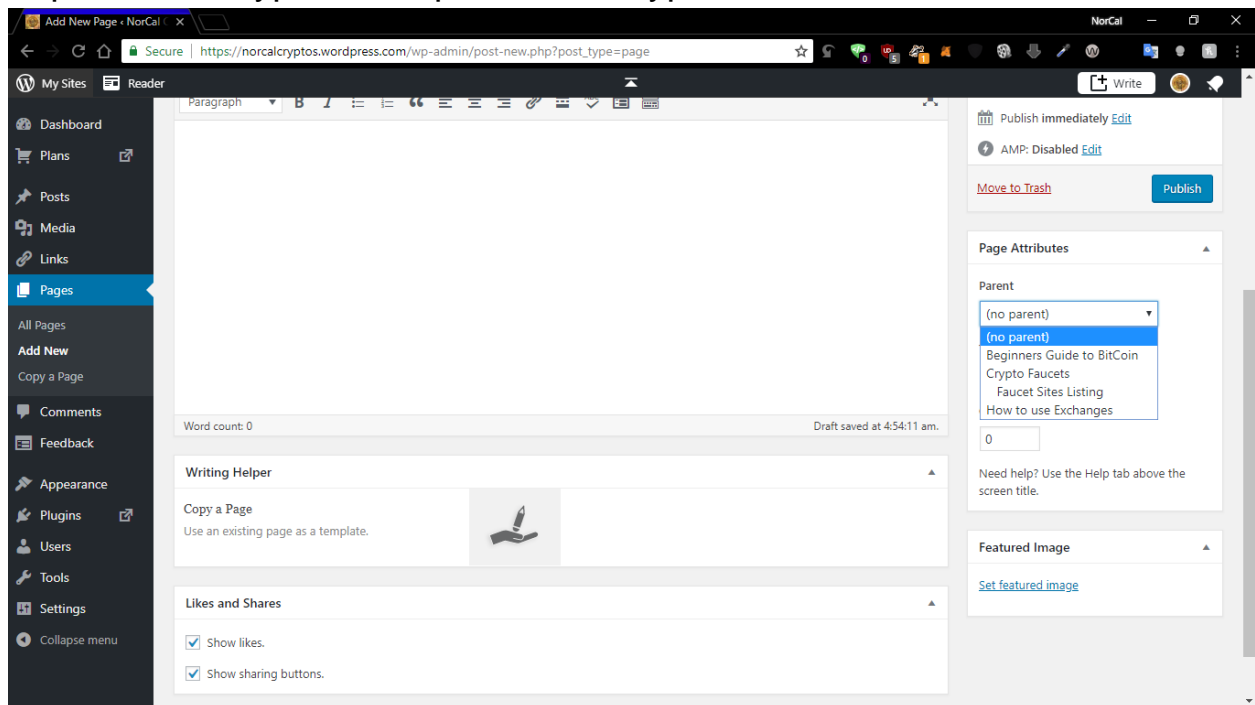

Adding a new Page is very similar to writing a new blog post, with just a few minor changes. There are no formats/tags/categories with Pages, but Pages can be set to be "under" other pages to create a structure to your website.
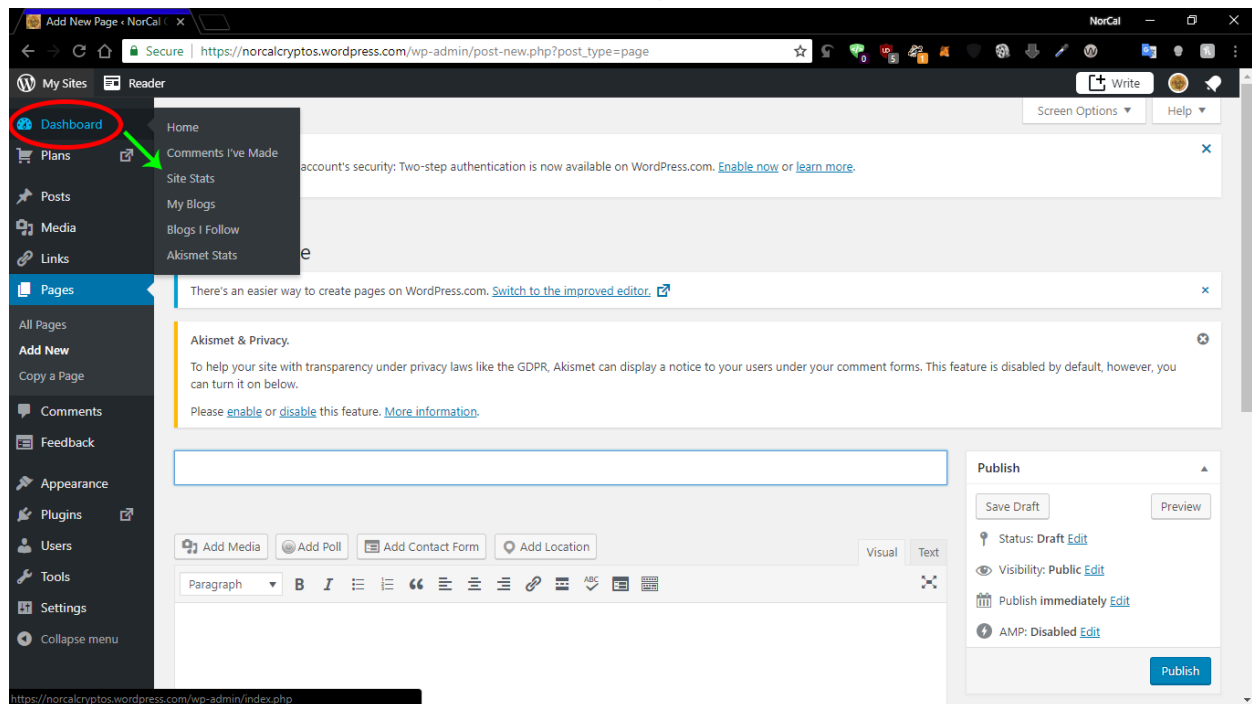

As in this example, you can see that "Faucet Sites Listing" is under "Crypto Faucets". This can help organize your menus, and creates a URL where each sub-page is listed under its parent pages
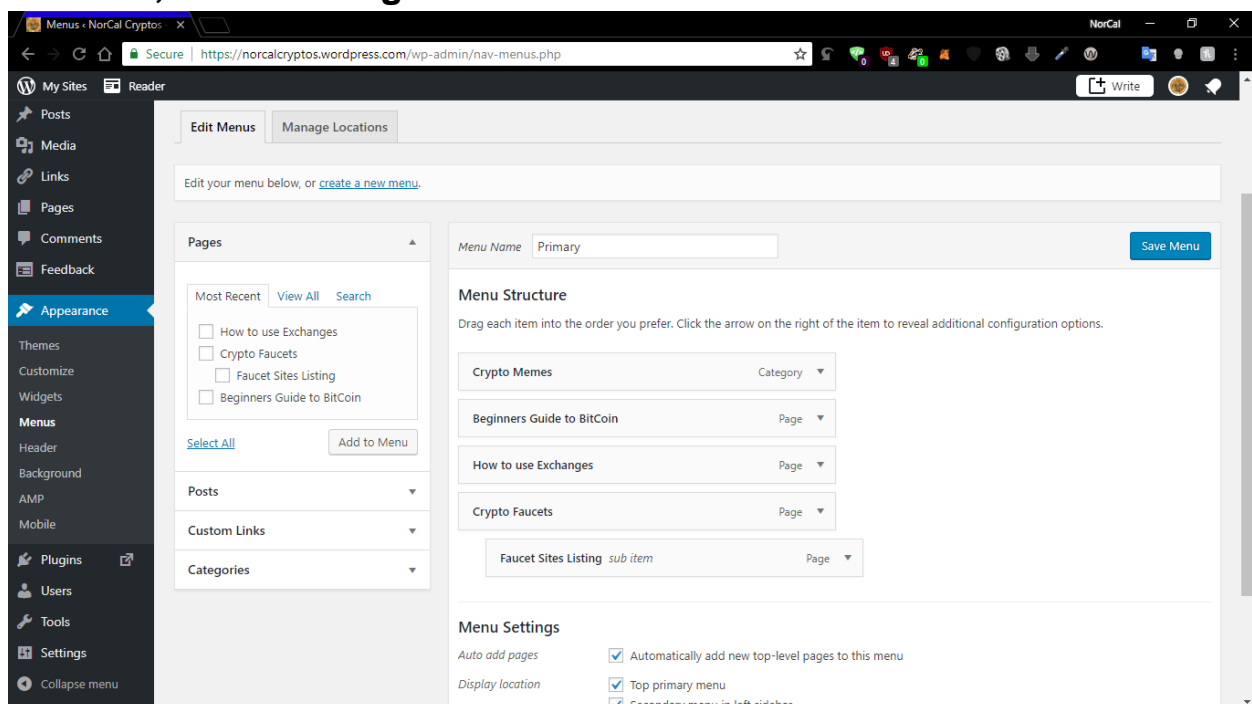

Such as:

https://norcalcryptos.wordpress.com/crypto-faucets/all-faucets/

To view your sites statistics and viewer count, click on the "Dashboard" button the left side-bar, then click "Site Stats"

If you add new pages and want them listed on your menus, then you can edit your menus structure by clicking "Appearance" on the left side-bar, then clicking "Menus"

This was just a brief introduction on how to use WordPress. If you have any more questions, you are welcomed to email Joshua or Evalyn.
